1 Introduction

This document describes how the "TimeMate" system should be verified.

2 Reference Documents

1. Projekthandledning
2. Software Requirements Specification: "TimeMate", v. 0.2, Doc. number: PUSP214201
3. Software Requirements Specification: "BaseBlockSystem", v. 1.0, Doc. number: PUSS12002

3 Overview

During the project, three formal reviews are carried out.

1. Software Specification Review (SSR)
 - a. SDP
 - b. SRS
 - c. SVVS
2. Preliminary Design Review (PDR)
 - a. SVVI
 - b. STLDD
3. Product Review (PR)
 - a. SVVR
 - b. SSD
 - c. PFR

These formal reviews are carried out as described in Ref. 1. At least three days before a formal review an informal review will be carried out, without any customer representative involved. The informal reviews are scheduled so that updated material can be altered to be delivered to the formal review. In addition to the informal reviews listed above the SDDD should also be reviewed in an informal review.

4 Test Cases

4.1 Test Environments

All tests will be run in one or more of the following environments.

1. JUnit 5.

2. Webbrowser (Chrome, Firefox, Microsoft Edge).
3. Operating System (Windows).
4. Database system (MySQL).
5. IDE (Eclipse).

4.2 Test Types

These are the types of tests that will be carried out throughout the project

- **Unit test:** This is carried out by individual developers while they are coding and before the code is pushed to Github. This is done informally, and no documentation is needed.
- **Function test:** Each function are tested by the test group, whom notes the test outcome in a spreadsheet. The results of the tests are then sent back to the developers.
- **System test:** General tests for the whole system and are carried out by the test group.
- **Regression test:** All relevant tests are redone if an update is made to the system.
- **Acceptance test:** These tests are performed by the customer and is a combination of the tests stated above and the customer's own tests.

5 Requirements Checked in Reviews

In reviews all requirements should be checked by the reviewers.

The following requirements (according to Ref. 2) are only verified through reviews: 6.2.2, 6.5.2, 7.0.1, 7.0.2, 7.0.3, 7.0.4, 7.0.5, 7.0.6, 7.0.7, 7.0.8, 8.1.1, 8.1.2, 8.1.3.
